

## GAS STORAGE HOT WATER SYSTEM

THE THERMANN 4\* GAS HOT WATER HEATER CAN SUIT ANY FAMILY TYPE. WITH AN ADJUSTABLE THERMOSTAT FOR SAFETY AND EFFICIENCY IT ALLOWS YOU TO BE IN CONTROL OF YOUR OPERATING COSTS AND PERFORMANCE. THE UNIT HAS A SMALL FOOTPRINT WHICH MAKES IT IDEAL FOR REPLACING A 3\* CHANGEOVER.

## **CONTINUOUS FLOW 6\***

### **HOT WATER SYSTEMS**

THE THERMANN 6\*, ENERGY EFFICIENT GAS
CONTINUOUS FLOW UNIT ENSURES YOU WILL
HAVE ENOUGH HOT WATER, WHEN YOU NEED
IT. WITH A 12 YEAR WARRANTY, YOU CAN REST
ASSURED YOU ARE COVERED FOR THE LIFE
OF THE UNIT, AND UNIVERSAL CONTROLLERS
ENSURE YOU ALWAYS HAVE PRECISE CONTROL
OF YOUR HOT WATER TEMPERATURE SETTINGS.

## EVACUATED TUBE SOLAR

### **GAS BOOSTED**

THERMANN EVACUATED TUBE SOLAR GAS BOOSTED SYSTEMS OFFER RELIABILITY AND EFFICIENCY. PASSIVE SUN TRACKING MEANS MORE OF THE SUN'S RAYS ARE CONVERTED TO USABLE HOT WATER THROUGHOUT THE DAY - REDUCING YOUR POWER BILLS. WITH THE GAS BOOSTED CONTINUOUS FLOW UNIT, YOU'LL NEVER RUN OUT OF HOT WATER, NO MATTER THE WEATHER.

#### **SPECIFICATIONS**

## EVACUATED TUBE SOLAR

### **HOW IT WORKS**

#### STEP 1

The sunlight strikes the dark absorber coating inside the tube.

#### STEP 2

The heat pipe transfers the heat up to the copper header pipe location in the insulated manifold box.

#### STEP 3

A circulator moves water from the storage tank to the copper pipe warming the water. The solar heated water is then pushed down into the storage tank for use. Anti-frost is built in to the Thermann system to ensure solar hot water can be provided even in cold regions.

#### **PASSIVE SUN TRACKING**

The round tube design of the system passively tracks the sun throughout the day giving the highest possible performance from early morning through to late afternoon.

#### **ELECTRIC & GAS SETUPS**

#### **Electric Booster**

#### Gas Booster

## HEAT PUMP HOT WATER SYSTEM

MADE IN GERMANY, THE THERMANN HEAT PUMP EXTRACTS HEAT FROM AMBIENT AIR AND QUIETLY TRANSFERS IT TO HEAT WATER. IT COMES WITH A REMOVABLE INTAKE GRILL FOR EASY CLEANING AND SERVICING WHERE ACCESS IS LIMITED.

#### **SPECIFICATIONS**

#### Heat Pump

| Heat output   | kW     |

## HEAT PUMP HOT WATER SYSTEM

# **HOW IT WORKS** AIR IN AIR OUT (THERMAL ENERGY) **HOT WATER OUTLET COLD WATER INLET**

- 1. A fan draws air through an evaporator. Thermal energy within the air is transferred to a liquid refrigerant causing it to change into a gas.
- 2. The refrigerant gas is then drawn into a compressor which increases the pressure and as a result increases the temperature.
- 3. A condenser (heat exchanger) then transports the hot gas refrigerant around the outside of the water tank. This heats the water inside the tank and the gaseous refrigerant reverts into a liquid.
- 4. The pressure of the refrigerant is reduced as it goes through an expansion valve and returns to the evaporator for the process to start again.
